

Module 2

We will be matching pre and post-tests to assess the integration of new knowledge, skills and attitudes with respect to working with adolescents who are at risk or actively using substances. As such, we will not ask for your name, but a unique identifier which will allow us to pair the pre with the post-test. Please fill in your unique identifier below - it should be your birthdate (Date_Month_Year), gender (M/F) and your first and last initial. For example, for a female named Jane Doe who was born on February 3, 1980, her unique identifier would be **03021980FJD**.

Unique Identifier: _____

Please circle one of the following.

PRE-TEST

POST-TEST

Answer the following true/false questions.

1. Traumatic experiences impact individuals differently.
2. Most consumers of mental health services are trauma survivors.
3. Trauma survivors tend to have worse health outcomes than those who have not experienced trauma.
4. Trauma survivors never heal from trauma.
5. Trauma symptoms are adaptations to the stressful situation.

Fill in the blanks on the following questions:

6. _____ is a symptom of trauma where a client is overly aware of experiences of danger.

7. Name the three trauma-related disorders, according to the DSM V.

8. Name three drug-related health outcomes which are associated with adverse childhood experiences.

9. Name the most common responses to trauma.

10. What are three ways strategies for providing trauma-informed care?

Check the box which most closely corresponds to your response.

	Strongly Agree	Agree	Neither Agree nor Disagree	Disagree	Strongly Disagree
Most trauma survivors re-experience their traumas.					
The majority of trauma survivors are female.					

Trauma and substance use are interrelated.

Most of the health problems experiences by trauma survivors are somatic.

About half of the persons in substance use treatment are trauma survivors.
